DRAINAGE MANUAL

S.No.	Contents	Page No.
1.	INTRODUCTION	1
1.1	General	1
1.2	Soil Salinization and Drainage	1
1.3	Waterlogging and Salinization	3
1.4	Irrigation with Brackish Water & Drainage	10
1.5	Leaching and Drainage Need	11
1.6	Benefits from Drainage	13
1.7	Irrigation Planning and Drainage	14
1.8	Indian Experience	14
2.0	DRAINAGE SYSTEMS	16
2.1	General	16
2.2	Surface Drainage System	17
2.2.1	The random system	19
2.2.2	The parallel system	19
2.2.3	The cross slope system	23
2.3	Sub Surface Drainage System	23
2.3.1	Classification of Subsurface drainage system	25
2.3.1.1	Relief drainage	25
2.3.1.2	Interception drainage	27
2.3.2	Vertical drainage	30
2.3.3	Mole drainage	33
3.0	DESIGN CONSIDERATION	35
3.1	General	35
3.2	Indian Standards	36
3.2.1	Classification of drains	36
3.2.2	Capacity/design discharge of drains	36
3.2.3	Intensity of rainfall	37
3.2.4	Design frequency of rainfall	37

3.2.5	Period of disposal	37
3.2.6	Runoff	38
3.2.7	Runoff for composite crops	38
3.3	Parameters for Surface Drainage	38
3.3.1	Factors for converting annual maximum series to partial duration series	39
3.3.2	Factors for converting point rainfall values to areal average values	40
3.3.3	Depth area duration relationship	41
3.3.4	Runoff Coefficient	41
3.3.5	Time of concentration	44
3.3.6	Synthetic unit hydrograph parameter	48
3.3.6.1	Time Coefficient Ct	50
3.4	Parameters for Subsurface Drainage	51
3.4.1	Soil permeability	54
3.4.2	Depth to impermeable layer	54
3.4.3	Desirable depth of the water table	55
3.4.4	Drainage coefficient	56
3.4.5	Deep percolation	58
3.4.6	Drainable porosity	59
3.5	Tolerance Limit	61
3.5.1	Plant tolerance to waterlogging	61
3.5.2	Plant tolerance to Salinity	61
3.6	Land levelling and Smoothing	63
4.0	LABORATORY & FIELD INVESTIGATION	66
4.1	Survey and Sequences	66
4.1.1	Investigation for surface drainage	66
4.1.2	Investigation for subsurface drainage	69
4.2	Field Investigation	73
4.2.1	Hvorslev point piezometer test	73
4.2.2	Bail test in slotted piezometer	75
4.2.3	Auger hole method	77

4.2.3.1	Computation of k by Ernst equation	79
4.2.3.2	Computation of k by Hooghoudt's equation	80
4.2.3.3	Luthin & Kirkham method for computation of k	80
4.2.4	Measurement of field saturated hydraulic conductivity by Guelph permeameter	85
4.2.4.1	Guelph permeameter apparatus	86
4.2.4.2	Theory	86
4.2.4.3	Procedure of field use	90
4.2.4.4	Example	92
4.2.5	Measurement of K by Dilution Technique	94
4.3	Laboratory Method	98
4.3.1	Constant head method	98
4.3.2	Variable head method	99
4.3.3	Limitations of Laboratory method	99
4.3.4	Factors controlling permeability	101
5.0	SYSTEM DESIGN PROCEDURE	103
5.1	Surface Drainage	103
5.1.1	Application of unit hydrograph technique for estimation of design flood	103
5.1.1.1	Unit hydrograph theory and assumption	104
5.1.1.2	Procedure for computation of design flood hydrograph	105
5.1.1.3	Derivation of design unit hydrograph	108
5.1.1.4	Computation of design flood unit hydrograph	112
5.1.1.5	Remarks	112
5.1.2	Estimation of direct runoff from storm rainfall by SCS method	113
5.1.2.1	Determination of direct runoff consequent to several days consecutive rainfall	117
5.1.2.2	Estimation of drainage discharge	122
5.1.3	Time area method of discharge estimation	124
5.1.3.1	Concept of time area method	124
5.1.3.2	Calculation of out flow hydrograph	132
5.1.3.3	Assumption & limitations	132

5.2	Sub surface Drainage	133
5.2.1	Description of the study area	134
5.2.2	Design of Field Drains	134
5.2.2.1	Hydrogeological Investigation	136
5.2.2.2	Determination of Drainage Coefficient	138
5.2.2.3	Design of Sub surface drainage	151
5.2.3	Design of a tubewell drainage system	158
5.2.3.1	Data Requirement	158
5.2.3.2	Example for vertical drainage design	158
5.2.3.3	Sub surface horizontal drainage system	161
5.2.3.4	Donnan's Equation	161
5.2.3.5	Hooghoudt's Equation	164
6.0	DATA REQUIREMENTS AND LAYOUT	172
6.1	Type of Data	172
6.1.1	Climate	173
6.1.2	Topography	173
6.1.3	Outlet conditions	173
6.1.4	Soils & sub soils	173
6.1.5	Salinity & alkalinity	174
6.1.6	Crop requirements	174
6.1.7	Ground water table	174
6.1.8	Type of Irrigation system	174
6.1.9	Existing drainage facilities	174
6.1.10	Surface runoff	174
6.1.11	Drainage coefficient	175
6.1.12	Availability of Machines & construction materials	175
7.0	SPECIAL CONSIDERATIONS	176
7.1	Saline soils	176
7.2	Coastal soils	177
7.3	Heavy soils	179
7.3.1	Closed gravity drains	179
7.3.2	Mole drainage	180
7.3.3	Surface drainage	180
7.3.4	Well drainage	180
7.3.5	Drainage systems under heavy soil	180

7.3.5.1	Raised bed sunken bed system	180
7.3.5.2	Ridge furrow system	182
7.3.5.3	Broad bed & furrow system	182
7.3.5.4	Parallel open ditch system	182
7.3.5.5	Vertical drainage	182
7.3.5.6	Pipe drainage system	184
7.4	Leaching of salts	187
7.4.1	Problem definition	187
7.4.2	Green and Ampt infiltration equation	187
7.4.3	Solute movement in different layers: Salt balance approach	190
7.4.3.1	Salt balance of top reservoir when saturation front has not crossed the reservoir	191
7.4.3.2	Salt balance of top reservoir when saturation front has crossed the reservoir	192
7.4.3.3	Salt balance of second reservoir when it is not filled with water	193
7.4.3.4	Salt balance of second reservoir when it is filled	193
7.5	Example Results	193
7.5.1	Variation of $C-C_i/Co-C_i$ with time	196
7.5.2	Estimation of leaching requirement	201
7.5.3	Breakthrough curve	203
