CONTENTS

Title	Page No.
CHAPTER-1 SURFACE WATER MODELING: RAINFALL-RUNOFF MODELING, FLOOD MODELING AND URBAN HYDROLOGY	**1-64**
1.1 Introduction	1
1.2 Brief History of Hydrological Models	2
1.3 Classification of Hydrological Models	4
1.4 Temporal and spatial scale in hydrological modeling	8
1.4.1 Hydrological processes and observational scales	8
1.4.2 Hydrological Modeling (Working) Scale	10
1.4.2.1 Point scale	11
1.4.2.2 Micro-scale	12
1.4.2.3 Meso-Scale	12
1.4.2.4 Macro-Scale	12
1.5 Hydrological Processes and Runoff Routing considered in Runoff Assessment	13
1.5.1 Physical processes considered in hydrological model	13
1.5.2 Spatial hydrological model structure: spatial discretization	15
1.6 Model Calibration and Validation	18
1.6.1 Calibration methods	19
1.6.2 Model validation	22
1.6.3 Performance validation	23
1.6.3.1 Statistical and graphical performance indices	23
1.6.3.2 Performance indexes for model selection	23
1.6.4 Advanced techniques and general guidelines for model calibration and validation	23
1.6.5 Guidelines for model performance validation	25
1.7 Uncertainty Analysis	25
1.7.1 Commonly used uncertainty estimation techniques	28
1.7.1.1 Generalized Likelihood Uncertainty Estimation (GLUE)	28
1.7.1.2ParaSol and modified ParaSol	28
1.7.1.3 Sequential Uncertainty Fitting (SUFI-2) procedure	28
1.7.1.4 Bayesian inference	28
1.7.1.5 Markov Chain Monte Carlo (MCMC)	29
1.7.1.6 Importance sampling (IS)	29
1.8 Flood Modeling	29
1.8.1 Dam Break Flows	30
1.8.2 Flash Floods	30
1.8.3 Real-Time Flood Forecasting	30
1.8.4 River Bank/Bed Erosion and Sediment Transport	30
1.8.5 Urban Flood Modeling	31
1.9 Data Requirement for Rainfall-runoff and Flood Modeling	34
1.9.1 Rainfall characteristics and Other Metreological Data	35
1.9.2 Infiltration and other loss characteristics	36
1.9.3 Streamflow characteristics	36
1.9.4 Watershed characteristics	36
1.10 Hydrological Modeling Softwares for Rainfall-Runoff and Flood Modeling	38
1.11 Remarks	46
1.12 Way Forward	48

CHAPTER-2 SUBSURFACE WATER MODELING – FLOW AND CONTAMINANT TRANSPORT 65-124
2.1 Introduction 65
2.1.1 General 65
2.1.2 Hydrogeological settings of India 65
2.1.3 Rainfall and groundwater resources of India 67
2.1.4 Groundwater related issues in India 67
2.1.5 How modeling can help groundwater management? 69
2.1.6 Issues related to modeling 69
2.1.7 Modeling as the management tool 69
2.2 Subsurface Modeling 70
2.2.1 General 70
2.2.2 Issues Related to sub-surface zone Modeling 71
2.2.3 What Groundwater models can do? 72
2.3 Unsaturated/Vadose Zone Modeling 73
2.3.1 General 73
2.3.2 Governing equations of water and transport in unsaturated soils 73
2.3.3 Input data for unsaturated zone modeling 74
2.3.4 Modeling of unsaturated Flow 76
2.3.5 Modeling of solute transport through unsaturated zone 78
2.3.6 Unsaturated zone modeling software 78
2.3.7 Concluding remarks 80
2.4 Groundwater Modeling Process 80
2.4.1 General 80
2.4.2 Steps associated in modeling 80
2.4.3 Flow and transport processes 82
2.4.4 Governing equations 82
2.4.4.1 Groundwater flow equation 82
2.4.4.2 Solute transport equation 83
2.4.5 Classification of groundwater models 84
2.4.6 Numerical methods to solve flow and transport equations 85
2.4.7 Concluding remarks 87
2.5 An Overview of Groundwater Models 87
2.5.1General 87
2.5.2 Groundwater simulation models 88
2.5.3 Groundwater management models 89
2.5.4Transport processes 89
2.5.5 Surface water - groundwater interactions 90
2.5.6 Stochastic groundwater modeling 90
2.5.7 Optimization and decision making 90
2.6 Data Requirements for Saturated Zone Modeling 90
2.6.1General 90
2.6.2 Data requirement 91
2.6.2.1 Hydrogeological domain 92
2.6.2.2 Hydrostratigraphy 92
2.6.2.3 Aquifer properties 93
2.6.2.4 Conceptual boundaries 93
2.6.2.5 Stresses 93
2.6.2.6 Solute transport data 93

2.7 Applicability, Limitations and Future Trends of Groundwater Modeling 94
2.7.1 General 94
2.7.2 Applicability of groundwater models 94
2.7.3 Uncertainty and limitations of groundwater models 96
2.7.4 Emerging issues and future trends in groundwater modeling 98
2.7.4.1 Multi-scale issues 98
2.7.4.2 Process coupling and alternative modeling frameworks 99
2.7.4.3 Advances in computational efficiency 99
2.7.4.4 Uncertainty and optimization 100
2.7.4.5 Data acquisition and integration 100
2.7.5 Common errors in groundwater modeling 100
2.8 Groundwater Modeling Softwares 102
2.8.1 General 102
2.8.2 Categorization of groundwater modeling software 102
2.8.2.1 Analytical modeling software 103
2.8.2.2 Numerical modeling software 103
2.8.3 Available groundwater models 104
2.8.4 Selection of modeling software 111
2.8.5 Review of popular groundwater models 111
2.8.5.1 Computational capabilities 114
2.8.5.2 Overview of GUI 115
2.8.5.3 Licensing and support 115
2.8.5.4 Choice of groundwater model 115
2.9 Way Forward 116

CHAPTER-3 SNOW/GLACIER MELT RUNOFF MODELING 125-144
3.1 General 125
3.2 Snow and Glacier Melt Runoff 125
3.3 Modeling Approach 126
3.3.1 Degree-day approach or temperature index approach 128
3.4 Forecasting of Snowmelt Runoff 129
3.5 Data and Parameters 130
3.5.1 Snow Cover Area (SCA) 130
3.5.2 Division of catchment into elevation bands 131
3.5.3 Degree days 132
3.5.4 Degree day factor 132
3.5.5 Rain on snow 132
3.6 Processes of Snow/Glacier Melt Runoff Modeling 133
3.6.1 Snow accumulation processes 133
3.6.2 Snow ablation process 133
3.6.3 Precipitation data and distribution 133
3.6.4 Temperature data – Space and time distribution and Lapse Rate 134
3.7 Snowmelt Runoff Models 135
3.7.1 Snowmelt runoff model (SRM) 135
3.7.2 Snowmelt Model (SNOWMOD) 136
3.7.2.1 Model structure 136
3.7.3 Water flow and balance simulation model (WaSiM) 137
3.7.4 GEOtop hydrological model 137
3.7.4.1 Availability 138
3.7.4.2 Use and license of GEOtop 138
3.7.4.3 Brief Description 138

3.7.5 HBV Light 139
3.7.5.1 Advantage & Shortcomings 140
3.7.6 TAC D 140
3.7.6.1 Advantages & Shortcomings 140
3.7.7 SWAT model 140
3.7.8 University of british columbia watershed model (UBC) 140
3.8 Way Forward 141

CHAPTER-4 SOIL EROSION AND SEDIMENT TRANSPORT MODELING 145-170
4.1 Introduction 145
4.2 Brief Review of Soil Erosion and Sediment Transport Modeling Approaches 145
4.3 Classification of Models 146
4.3.1 Empirical models 146
4.3.2 Remarks on empirical models 146
4.4Conceptual Models 147
4.4.1 Concluding remarks on conceptual models 147
4.5Physically-Based Models 148
4.5.1 Inter-rill erosion process 149
4.5.2 Rill erosion process 149
4.5.3 Transport process 149
4.5.4 Concluding remarks on physically-based models 149
4.6 Selecting an Appropriate Model 150
4.7 Model Structure 150
4.8 Spatial Representation 151
4.9 Temporal Resolution 151
4.10 Review of Popular Erosion and Sediment Yield Models 152
4.10.1 Universal Soil Loss Equation (USLE) and Modifications 152
4.10.2 AGNPS 152
4.10.3 AnnAGNPS 153
4.10.4 ANSWERS 153
4.10.5 CREAMS 154
4.10.6 HSPF 155
4.10.7 IHACRES-WQ 156
4.10.8 MIKE-11 156
4.10.9 SWAT 157
4.10.10 SWRRB/SWRRB-WQ 159
4.10.11 WEPP 159
4.10.12 LASCAM 160
4.10.13 KINEROS 161
4.10.14 SHESED 161
4.10.15 EUROSEM 162
4.10.16 Summary of Models 163
4.11 Way Forward 163

CHAPTER-5 SURFACE WATER QUALITY MODELING 171-206
5.1 Introduction 171
5.1.1 General 171
5.1.2 India's status of river water quality 172
5.1.3 Issues related to lakes and estuaries 172
5.1.4 Water quality challenges in India 173
5.1.5 Challenges in surface water quality modeling 174

5.1.6 Status of surface water quality modeling in India 175
5.2 Surface Water Quality Modeling: Importance 176
5.3 Modeling for Sustainable Water Quality Management 177
5.4 Basic concept, Governing equations, Rate constants and Coefficients 178
5.4.1 Basic concepts 178
5.4.2 Governing equations 178
5.4.3 Temperature 182
5.4.4 De-oxygenation model 182
5.4.5 Re-aeration model 182
5.4.6 BOD and DO model 183
5.4.7 Nutrients model 183
5.4.8 Nitrogen cycle 183
5.4.8.1 Organic Nitrogen Model 183
5.4.8.2 Ammonia Nitrogen Model 184
5.4.8.3Nitrite Nitrogen Model 184
5.4.8.4 Nitrate Nitrogen Model 184
5.4.8.5 Phosphorous Cycle 184
5.4.8.6 Organic Phosphorous Model 184
5.4.8.7 Dissolved Phosphorous 185
5.4.9 Coliform 185
5.4.10 Algae formulation 185
5.5 Approaches to Surface Water Quality Modeling 185
5.5.1 Rivers/Stream water quality modeling 185
5.5.2 Lake and estuary water quality modeling 187
5.6 A Review of different modeling approaches 187
5.6.1 Empirical and mechanistic models 188
5.6.2 Conceptual models 189
5.6.3 Process based models 189
5.6.4 Stochastic models 189
5.6.5 Analytical models 189
5.6.6 Numerical models 190
5.6.7 Black-box models 190
5.6.8 Stream tube models 190
5.7 An Appraisal of WaterQuality Models 190
5.8 Ways Forward 200

6 WATER RESOURCES SYSTEMS MODELING – STATUS AND FUTURE DIRECTIONS 207-228
6.1 Introduction 207
6.2 What is a Water Resources System? 207
6.2.1 Classification 207
6.2.2 Approaches for WRS modeling 208
6.3 Simulation 209
6.4 Optimization 211
6.4.1. Optimization techniques 211
6.4.1.1 Linear Programming (LP) 211
6.4.1.2 Nonlinear programming (NLP) 212
6.4.1.3 Dynamic programming (DP) 212
6.4.1.4 Genetic Algorithms (GA) 213
6.4.1.5 Ant Colony Optimization (ACO) 213
6.4.1.6 Particle Swarm Optimization (PSO) 213
6.4.1.7 Multi Criteria Decision Making (MCDM) 213

6.5 Simulation-Optimization Techniques 214
6.6 Game Theory 214
6.7 Review of selected WRS models 214
6.7.1 Generalized pure simulation based models 214
6.7.1.1 HEC Models 214
6.7.1.2 RIBASIM Model 215
6.7.1.3 Deltares Models 217
6.7.1.4 MIKE SHE 217
6.7.1.5 MIKE HYDRO Basin 217
6.7.1.6 eWater Source 218
6.7.1.7 NIH_ReSyP Model 218
6.7.1.8 WEAP Model 219
6.7.1.9. WMS Model 219
6.7.1.10 MODFLOW-OWHM 219
6.7.1.11 SWMM 219
6.7.2 Generalized simulation–optimization models 220
6.7.2.1 MODSIM Model 220
6.7.2.2 RiverWare Model 220
6.7.2.3 WRIMS (CalSim Model) 221
6.7.2.4 ARSP Model 221
6.7.2.5 OASIS Model 222
6.8 Evaluation of Models 222
6.9 Way Forward 222
